Straight or Curved Edge Sharpener SVS-50 by Tormek

**Features:-**

- Made for Turning Skew Chisels with a Straight or Curved Edge
- Can Also be used for Oval Section Skews
- Consists of Two Seats - One Open and One Closed
- Can Grind both Bevels Symmetrically when Turning Jig Upside Down
- Use for Straight Carving Gouges up to 2-Inches Wide

**Product Description**

Sharpening tools with curved blades can be tricky for even the steadiest hand. If you own a Tormek sharpening system (T-7, T-4, T-3, and SuperGrind), then this jig will make it simple to sharpen your skew chisels with a straight or curved edge, oval section skews, parting tools, beading tools, roughing gouges, straight carving gouges up to 2" wide, and more. The jig consists of a housing and two interchangeable seats - one open, and one closed. This allows it to swivel and be locked down fast at any angle between 0 and 45 degrees, meaning almost any blade can be honed to a razor sharp edge. It's also reversible, so your skew chisels have symmetrical bevels on both sides. Another important aspect is this is part of the complete Tormek water-cooled sharpening system that will make your entire shop's worth of tools finely honed, while taking less metal off the tools and bits, increasing longevity. Your tools will love it, and you'll love your sharp tools.
