| Shipping Weight (Gross) | 1.48 kg |

Tormek SVP-80 Molding Knife Jig is for all shapes and makes of molding knives with 24, 30 or 38 mm distance between guide holes. Sharpens the face of the blade and therefore any shapes can be done. Maximum width of blades that can be sharpened is 100 mm (4-inches). The attachment comprises a base, a knife holder, an extra Universal Support with micro adjust and two pairs of hollow pins for the knife holder. The base is mounted on an extra Universal Support and on the existing Universal Support of the machine. The base is locked with a screw. An arm, which is locked with an adjustable hand lever, stabilizes the construction. The knife is placed on the pair of hollow pins on the knife holder, while a magnet keeps the knife in place. The holder has holes to fit various knife standards. Two pair of pins come with the jig. The knife holder glides on the base, which has PTFE surfaces to minimize the friction. The knives are ground on the face, and adjusting the nut on the horizontal Universal Support sets the grinding depth.

Features:-

For all Shapes and Makes of Molding Knives

Sharpens the Face of the Blade

Maximum Width of Blades is 4-Inches

Mounted on a Universal Support

Features Holes that Fit Various Knife Standards
