Klingspor abrasive belt CS 416 Y - dependable and durable for a wide range of applications

The **abrasive belt CS 416 Y** sets itself apart with its durability and is ideally suited for sanding a large variety of materials. Equipped with a cloth backing, it is distinguished by its high level of aggressiveness. The Klingspor abrasive belt is resistant to moisture.

Abrasive belt CS 416 Y with a semi-open coating

Its cloth backing made of Y-polyester lets the **abrasive belt CS 416 Y** reign supreme with unparalleled tear resistance. The bonding used for the abrasive material is made of synthetic resin. The abrasive material used for this product is **zirconia** alumina with a semi-open coating. This material is self-sharpening and affords the user an exceptionally high level of aggressiveness and abrasive performance. The semi-open coating of the grain also provides for reduced clogging.

Versatile and straightforward use of the abrasive belt

CS 416 Y

The **abrasive belt CS 416 Y** comes with a semi-open **zirconia** coating and can be used for rough sanding, edge machining and deburring as well as for surface sanding. Its aggressiveness and semi-open coating equip it with the properties needed to deliver outstanding efficiency and an excellent service life. It matches perfectly with surface grinding machines, wide belt machines, pedestal sanders and centreless sanding machines. Since this **blue abrasive** is particularly well suited for sanding skis, it can also be fitted on a ski grinding machine. No matter with which machine it is combined, the abrasive belt with its Y-polyester cloth backing excels with its exceptional tear resistance. Klingspor offers the abrasive cloth in a variety of grit sizes and as a wide belt, short belt and long belt version.
