

AIR COMPRESSOR FILTER Z-20 HIGH PERFORMANCE SUIT PLASMA CUTTERS WC-06255 BY WELDCLASS

SKU	Option	Part #	Price
5009295		WC-06255	\$479

Model	
Type	Filter
SKU	5009295
Part Number	WC-06255
Barcode	9341562062558
Brand	Weldclass
Features	
Standard Inclusions	1/4" Nipple / Joiner
Packaging + Shipping	
Shipping Weight (Gross)	1.48 kg

Specially developed for use with Plasma cutting machines, the PLATINUM Z-20 high performance Air Filter is a superior alternative to traditional "roll" type filters. PLATINUM Z-20 will filter water, dust, oil and particles down to 1-micron and is virtually maintenance-free thanks to the self-draining feature and super long-life filter cartridge/element. Using a Z-20 filter will help to increase plasma consumables life, reduce operating cost, improve cutting performance & reduced the likelihood of torch & machine malfunction. A highly recommended accessory for all plasma cutters.. & other applications where air quality is critical. Click here to read why proper air filtration is critical for plasma cutting, and how the PLATINUM Z-20 compares to other filters. **WHY USE PLATINUM Z-20 AIR FILTER ?** > Increases Plasma torch parts life & reduces consumable costs > Improves cutting performance > Self-draining - engineered for low maintenance, "set and forget" > Long-life filter cartridge (typical service life of up to 6 months) > High-performance filtration of water/moisture, dirt and oil particles down to 1-micron **SUPERIOR TO "ROLL" TYPE FILTERS:** > Roll filters require frequent cartridge replacement = ongoing cost > Z-20 filter cartridge lasts up to 6 months, or even 12+ months in cases of infrequent use = reduced cost > Roll filters are NOT self draining. If cartridge is not replaced regularly, this can cause issues such as mould, restriction in air flow, etc > Z-20 is self-draining and maintenance-free = no hassles **WHY**

hello@beyondtools.com

USE Z-20 FILTER IN ADDITION TO THE

FILTER/REGULATOR THAT CAME WITH MY PLASMA? >

Standard filter/regulators supplied with most modern plasma cutters provide a basic/minimum level of filtration, and typically remove around 50% of water & dirt particles. > Z-20 filter removes 99.97% of water, dirt & oil particles, significantly improving air quality and delivering the benefits mentioned above

MOUNTING INFORMATION: > Supplied with Nitto socket, Nitto plug, and 1/4" nipple/joiner to allow quick "inline" connection to existing air inlet on plasma cutter > Optional mounting bracket (WC-06257) can be used where filter is required to be mounted rigidly to a vertical surface
