LaserEdge™ is an innovative adhesive-free laser edging technology. This new, two-layer edgeband, offered in proprietary PP, ABS or PMMA polymer formulations, replaces commonly used edging solutions for all machine technologies currently on the market. LaserEdge is applied using a highly efficient laser that melts a color-matched functional layer on the reverse side of the edgeband and welds it to the carrier board. Features:-

- Permanent invisible seam thanks to a pure polymer, adhesive-free solution
- Exact color match of the functional and decorative layer
- Functional layer matched to the hardness of the decorative layer - no rubbing down of the seam in daily use
- Absolute freedom of color and decorative design choice - all product ranges can be used for laser processing
- Permanent and functional invisible seam
- Increased resistance of the boards to heat and moisture
- Increased process reliability
