LaserEdge™ is an innovative adhesive-free laser edging technology. This new, two-layer edgeband, offered in proprietary PP, ABS or PMMA polymer formulations, replaces commonly used edging solutions for all machine technologies currently on the market. LaserEdge is applied using a highly efficient laser that melts a color-matched functional layer on the reverse side of the edgeband and welds it to the carrier board. Features:-

Permanent invisible seam thanks to a pure polymer, adhesive-free solution

Exact color match of the functional and decorative layer

Functional layer matched to the hardness of the decorative layer – no rubbing down of the seam in daily use

Absolute freedom of color and decorative design choice – all product ranges can be used for laser processing

Permanent and functional invisible seam

Increased resistance of the boards to heat and moisture

Increased process reliability
