Brand	Lynx
Technical - Main	
Blade Length	300 mm
Teeth	11TPI
Packaging + Shipping	
Shipping Weight (Gross)	1.48 kg

The wooden framed Turning Saw (also known as the Frame Saw) is used for a range of curved work. When twisted, the twine at the top of the frame gives the blade its tension. This is a very traditional style saw and are believed to have origins in the Middle Ages, when the blades were so thin and flexible that the frame stopped them from buckling. The frame is made from polished beech with turned handles.
