Brand	Dremel
Packaging + Shipping	
Shipping Weight (Gross)	1.48 kg

This is a good general purpose vise for holding all sorts of things to free up your hands to use your tools. It's great for things like making jewellery, soldering circuit boards, modelling etc. The swivel head lets you get the work in just the right position and the soft jaws won't leave scratch marks. The clamp and base can be separated so it can be used as a clamp on its own. The tool holder mounts your Dremel rotary tool (fits any model with the coarse nose thread) so you can hold and move the work, handy in certain situations. Another nice feature is the quick adjustment. Just push the button to slide the jaws in and out on the bar then tighten with the screw handle. This make it very quick to hold things! No more winding in and out forever when holding small then big objects. 3 In 1 Vise

Swivel head vise

Standalone clamp

Dremel rotary tool holder

Features

Removable soft jaws won't scratch the work piece

Clamps to any workbench or table

Rotates 360 ° and tilts 50 °
