These large crosscut saws are used mostly in forestry work and the crosscutting of large logs. But in recent years, these have been bought by people aiming to cut their own fire wood etc. They are a great alternative to chain saws in both a safety and environmental way and can be used by anyone! Get the family to help!

The One Man Cross Cut Saw with Champion Tooth (Standard) or Great American Tooth has a clear finished beech handle and comes complete with an auxiliary handle which can be attached to the front of the blade so you can get some additional assistance with cutting if necessary. The handle can also be fitted to the top of the blade to help you push the blade if using alone.

Saw Tooth Options

Great American Style Tooth

The teeth are a Great American style tooth which means each tooth cuts the wood and clears the shavings. The gullets to enable the waste wood to be cleared whilst cutting.

Champion Tooth

The latest addition to our one man crosscut saw family, the champion tooth pattern is a style of tooth pattern that has cutter teeth that cut the wood and it has raker teeth that remove the wood waste as you push and pull the saw through the wood. The gullets also assist in clearing the waste wood. Having these variants on the saw can lead to more efficient cutting.

These large saws are used mostly in forestry work and the crosscutting of large logs. But in recent years, these have

been bought by people aiming to cut their own fire wood etc. They are a great alternative to chain saws in both a safety and environmental way and can be used by anyone! Get the family to help!

The One Man Cross Cut Saw is 3ft long with Champion Tooth has a clear finished beech handle and comes complete with an auxiliary handle which can be attached to the front of the blade so you can get some additional assistance with cutting if necessary. The handle can also be fitted to the top of the blade to help you push the blade if using alone.

Recommended File is our Large File.

A customer has confirmed he has cut frozen, wet logs in Finland with this saw!

SAWS COMES WITH AN AUXILIARY HANDLE AS STANDARD.

Available as a 3ft and a 4ft version.

Maintenance: The large file (as seen on this page and on the sharpening page) is used for sharpening these items. Saw setting pliers are not appropriate for saws with teeth of this size.

Sizing advice: we recommend a saw length that is double the size of wood you are wanting to cut i.e., if you log has 2ft diameter, you'd need a 4ft saw. This is to ensure that you can get enough stroke in your cutting.

Key Features

Beech Handle plus Auxiliary Handle for use as a Two Man version if required

Special Great American Tooth pattern for use on logs etc or Champion Style Tooth pattern which means each tooth cuts the wood and clears the shavings. The gullets to enable the waste wood to be cleared whilst cutting.

Can be Re-sharpened using a Large File

Please check this link to see how the auxiliary handle fits to the
