Aqua Stop Pen (suit Veneer Board & Edging) by Dollken, Manufactured in Germany *for the effective sealing of joints*
The negative effects of moisture on wood-based panels and joints in furniture and components is well known. Moisture can find its way through hairline cracks or open pores in a board surface/edge, or where the edging glue-joint does not completely protect the underlying substrate from exposure. Damage due to the presence of moisture, through either direct contact or by capillary action, can now be avoided with the use of the unique water-resistant "AQUA-STOP-PEN".

Features:-

Seals the joint, thus ensuring longevity of the panel and furniture

Features a special felt tip, allowing quick and simple application by hand

Drying time is approximately 1 minute for the joint to be permanently sealed

Can be used on finished furniture, components and existing built-in furniture

Provides hundreds of metres of protection from a single pen.

The simple application technique allows for the product to be applied easily in critical areas such as kitchen or bathroom cupboards and doors.

The highly protective "nanotechnology-based" fluid offers unique sealing properties and more!

highly economical

excellent water-repellent properties

oil and dirt-repellent properties
