Shipping Weight (Gross)	1.48 kg

A pair of adjustable jigs for accurately setting up your planer blades. With lockable micrometer setting and magnetic feet, all the blades in the cutting block can be set accurately to the same height. The Planer Knife Setting Jig will help you set your Planer Knives quickly and accurately (using micro adjustable magnets). The Jig holds the knife firmly in position allowing the use of both hands to tighten the gibs / set screws. How to use the Jig (removing and replacing blades):-
Set the Jigs on the Cutter Head.
Read the Jigs Red Scale and White Scale (record the two numbers);
With the gibs loosened and the knife setting in the cutter head, set one jig on each end of the knife (ensure the jigs are set at the two numbers recorded earlier).
