Shipping Weight (Gross)	1.48 kg

**This little jig is designed for sharpening short woodcarving tools and the shortest chisels. Suitable for straight shanked tools, such as wood chisels, carving gouges and tools for power carvers.**

The jig has two parallel flanges running on both sides of the Universal Support which ensures that the jig at all times - even when rotated - holds the tool square to the grindstone. This is a great advantage, as you can continuously concentrate on how the edge touches the grindstone or the honing wheel without having to worry whether the jig is square to the stone.

Min length of tool 45 mm (1¾") at 20° edge angle.

What differs SVS-38 from SVS-32?

SVS-38 is a further development of SVS-32. It can handle slightly wider tools but apart from that, the function is the same as for the SVS-32 jig.

SVS-38: Max. tool width 38 mm.

SVS-32: Max. tool width 32 mm.

### SVS-38 Design

This patented jig is developed for short woodcarving tools, short chisels and tools for power carvers. The jig has two parallel flanges running on both sides of the Universal Support.
