Adjustable Bar Pattern Tap Wrench #0

M1-M8, 1/16-3/8" Bar Pattern Tap Wrench

A tap wrench used in combination with a thread cutting tap is the traditional method used to tap (thread) a hole (male thread).

This is the preferred tapping method when precision tapped threads are required on prototypes, repairs, small production runs and when minimal material exists around the hole to be tapped.

hello@beyondtools.com

This style of tap wrench provides excellent feedback to the user as they create the tapped hole.

Long, alloy steel, SureGrip coated handles provide balance, control and good grip, even in the presence of cutting fluids.

Heavy duty construction to withstand the torque applied during tapping operations.
