Features:

Designed to fit both Makita and other manufacturer's saw. Tip-embedded tooth or "Deep Tooth" blades are especially tough & hard wearing. The Tungsten tips are specifically designed to slide in from the side of the blade and inserted into the body of the blade. The radio frequency heat brazing is then used for the joining of the tip to the body. The body supports the tip on a larger surface area continued around the front of the tooth which also provides a larger brazing area to enable a safer & more stable tooth. These blades easily cope with knotty wood and will normally slice through nail and screw embedded timber without damaging teeth.
