Shipping Weight (Gross)	2.35 kg

itted with the most powerful Arbortech motor yet, the *Mini Carver™* is capable of taking users through shaping, sculpting and sanding stages seamlessly. Featuring a durable Optibelt to deliver more power and torque for faster, smoother carving, and quick change system to swap attachments at the press of the button. The *Mini Carver™* is the ideal power tool for wood sculptors and carvers alike who value performance, efficiency and versatility.

This is the most versatile of all the power carving tools. It comes with a 50mm blade that allows for side-to-side shaping, that can be used for rapid wood removal, smooth shaping, and delicate texturing. Additionally, it includes a sanding system with a rubber backing pad that moulds to suit the shape of your project.

The *Dust Extraction Attachment* is a standard inclusion that can be fitted to the tool and attached to a vacuum hose during sanding operations. It will help keep work spaces free from wood dust for a cleaners and safer environment.

The sanding function has been further enhanced with the addition of a flexible rubber backing pad. By using the variable speed option with the sanding system it will allow you to continue to shape gently or take you through the finishing stages of sanding.

The extension arm brings this tool into its own. Designed for 50mm blades and sandpaper grit, you can now sculpt and sand wood in previously hard-to-reach places. The size and extension of the blade means you have better control and visibility.

The 6-speed settings range from 6000 to 19,500 RPM, allowing users to adjust the RPM of the *Mini Carver™* to suit a variety of wood carving, sculpting, and sanding needs.

Setting 5 and 6 is the ideal speed for high-performance wood carving and sculpting.

Setting 3 and 4 will allow for aggressive sanding needed for evening-out rough surfaces.
