Type	Wood Carving Blade
SKU	87434096
Part Number	IND.FG.600.00
Brand	Arbortech
Packaging + Shipping	
Shipping Weight (Gross)	1.48 kg

The Arbortech *TURBO Scraper™* is like a turbocharged version of a traditional hand scraper. It has been specifically designed to cut on a negative angle resulting in minimal tear-out and chipping. This disc can be controlled by pressure and gently scrapes away at wood, delivering a smooth, scratch-free finish. Its unique design provides unparalleled accuracy, allowing you to see your carving progress, making it the perfect tool for highly detailed work. The *TURBO Scraper™* is designed to fit the *Power Carving Unit™* or any standard 100mm (4") or 115mm (4 1/2") grinder.

SAFETY AND CONTROL

The *TURBO Scraper™* is uniquely designed to provide exceptional control. You can carve as much or as little as you like by the amount of pressure you apply, making it the perfect attachment for all skill levels.

TURBO SCRAPER™ VS BURR DISC

Unlike a burr disc, the *TURBO Scraper™* won't get clogged up, ensuring top-notch precision. It makes cleaning a breeze without the need for an array of tools or safety gear. Additionally, the *TURBO Scraper* allows for easy rotation and replacement of its teeth, eliminating the need for a new disc.

UNPARALLELED QUALITY

This high-quality disc is made from forged aluminium with replaceable tungsten carbide teeth. These teeth can be rotated and replaced for optimum performance and longevity.

SEE EXACTLY WHAT YOU ARE CARVING, WHEN YOU'RE CARVING!

Unlike other power carving attachments, the *TURBO Scraper™* allows you to see what you are carving, making it ideal for woodworking projects that demand precision and accuracy with no room for error.
