Features

The 18V Cordless Heat Gun has a temperature control button that can be adjusted to set the temperature in 10°C increments from 30°C to 550°C.

The easy to use two-stage switch controls the selection of low & high air volume and temperature required for various applications. Three different sized nozzles are provided for various applications. The nozzles can be removed hands free by rotating the front cover. This protects the user from burning themselves on the extremely hot nozzle after use.

The convenient integrated hook can be used to hang the tool away safely between operations.

The set temperature and the battery level is displayed on the LCD panel.
