3110 Chisel / Bullnose / Shoulder Plane by Clifton
Plane Configurable as either a shoulder, bullnose or chisel plane the Clifton 3110 is a very versatile piece of kit. However, the thing that makes it truly remarkable, is that in any of its 3 roles it will outperform almost every equivalent single function plane on the market. As a shoulder plane it fills the hand nicely and the generous width means it can be used for fettling the cheeks of tenons as well as the shoulders. With the shorter nosepiece and either both, one or neither of the 1/64" and 1/32" precision shims installed, the 3110 becomes a high performance bullnose plane. Built to very exacting standards, the Clifton 3110 is a single, beautifully engineered solution to three distinct requirements. Length 6" (152mm) Width 1-1/8" (29mm) Mass (0.9 Kilos) **Scraper Set** Includes Concave and convex curved blade - designed for work on curved areas. Square edge blade Goose neck - Designed for work on curved projects.
