These **TradeQuip "Made for the Trade"** Vehicle Positioning Jacks make manoeuvring vehicles safely and easily, without touching the chassis! Constructed from high-quality powder-coated steel, they have an impressive lifting capacity of 680kg each. **TradeQuip** is a brand synonymous with premium quality automotive lifting equipment, and therefore these jacks are ideal for use in commercial premises such as mechanics and panel beaters workshops, car dealerships, as well as home garages. The smooth foot action squeezes the support legs together to lift the tyre off the ground, and the locking pin ensures optimum safety. Heavy-duty nylon swivel castor wheels enable the rolling of cars, quad bikes, vans and light trucks into tight areas with ease. Relocating non-running vehicles or shells will never again be a drama! This pair of positioning jacks will allow 180° pivoting, add you can add an extra pair to allow for 360° manoeuvrability. We often forget that working with cars and other vehicles can be a dangerous job. It's easy to get complacent about yours and your employees' safety when you have years of experience, however accidents can happen to anyone. Although garage and bottle jacks can lift heavy loads they are not designed to keep them there, so when the vehicle has been jacked up it's crucial that it is placed on a jack stand. TradeQuip jack stands are excellently designed to ensure you maximum safety. They have wide feet providing a strong base and a unique locking pin so there is no risk of them slipping. (Previous models include product code/s; 1078) **Features:-**
Steel Construction with metal rollers
