SAFETY PRECAUTIONS
 Always use proper safety procedures when using power tools.
 Read and understand the instructions.
 Do not use the tool for purposes other than those intended.
 Do not use the tool on materials not specified in the instructions.
 Do not use the tool on materials that are too hard for the tool.
 Do not use the tool on materials that are too brittle for the tool.
 Do not use the tool on materials that are too soft for the tool.
 Do not use the tool on materials that are too thick for the tool.
 Do not use the tool on materials that are too thin for the tool.
 Do not use the tool on materials that are too hot for the tool.
 Do not use the tool on materials that are too cold for the tool.
 Do not use the tool on materials that are too wet for the tool.
 Do not use the tool on materials that are too dry for the tool.
 Do not use the tool on materials that are too oily for the tool.
 Do not use the tool on materials that are too greasy for the tool.
 Do not use the tool on materials that are too sticky for the tool.
 Do not use the tool on materials that are too hard for the tool.
 Do not use the tool on materials that are too brittle for the tool.
 Do not use the tool on materials that are too soft for the tool.
 Do not use the tool on materials that are too thick for the tool.
 Do not use the tool on materials that are too thin for the tool.
 Do not use the tool on materials that are too hot for the tool.
 Do not use the tool on materials that are too cold for the tool.
 Do not use the tool on materials that are too wet for the tool.
 Do not use the tool on materials that are too dry for the tool.
 Do not use the tool on materials that are too oily for the tool.
 Do not use the tool on materials that are too greasy for the tool.
 Do not use the tool on materials that are too sticky for the tool.

FEATURES

Suitable for cutting concrete, brick, compressed fibre cement sheet, granite and other masonry building materials.

Utilising adaptor AUB100 these core drills can be used with core drilling machines.

Diamond core drills and hole saws require the use of proper lubrication, correct drill speed and proper pressure.

Drilling methods and techniques vary significantly depending upon the material being drilled.

To achieve optimum cutting performance and maximum core drill life use a slow to very slow drill speed, low drill pressure, and plenty of water for lubrication.

Variable speed drills work best since the correct speed can be selected.

Diamond core drills only drill out a portion of the resulting hole so they drill much faster than conventional blunt nose drills.

The life of any type of diamond drill depends upon the hardness, abrasiveness and thickness of the material being drilled and the specific drilling techniques used.

Using diamond core drills in hard materials is not difficult, however drilling the hole takes time.

You should consider that they aren't "drilling" a hole - they are "grinding" a hole.

DO NOT USE HAMMER ACTION.
